Dear Crash Data Researchers/Users:

Thank you for choosing crash data from the National Highway Traffic Safety Administration (NHTSA) for your research or other use. The information contained in this motor vehicle crash report is collected, maintained and distributed in accordance with Public Law 89-564. In accordance with this Public Law, NHTSA is required not to release any case information until completion of quality control procedures. These procedures include a review of the case material to extract all names, licenses and registration numbers, non-coded interview material, non-research related researcher comments in the margins, non-factual data, and the production number portion of the vehicle identification number (VIN).

If you requested NHTSA to query its database files in order to identify a specific crash, then that query was made using non-personal descriptors you provided for use in our search. This motor vehicle crash may have been identified from a data search and matches the general, non-personal descriptors you provided, but we cannot confirm that this is the specific crash report you requested.

If you have any questions with regard to the above procedures, please contact the Field Operations Branch, Crash Investigation Division, National Center for Statistics and Analysis at 202-366-4820. Again, please be advised that we cannot confirm that this is the case that you have specifically requested nor can we certify the information to be correct.

Case DSI-94-AB-01

[redacted], 1994

TECHNICAL SUMMARY

CONTRACTOR: Dynamic Science, Inc.
CONTRACT NUMBER: DTNH22-94-A-07049
CASE NUMBER: Case DSI-94-AB-01

[redacted]

Vehicle 1, a 1991 Ford Taurus LX four-door, was being driven west in the westbound travel lane of a three-lane, undivided, urban/residential roadway during the morning hours of a winter weekday in [redacted] Maryland. The roadway surface was completely covered with "glare" ice and had not been sanded or salted.

Vehicle 1 was traveling at a speed estimated to have been between 48 and 56 KPH (30 and 35 MPH) as it crested a hill and began the descent of a long 6% downgrade. The driver applied, and locked, the vehicle's brakes causing a forward skid that veered right across the roadway's north shoulder.

The vehicle then crossed a 15 cm (6 in) raised concrete curb and impacted a wood utility pole in a head-on configuration. The Delta V for this impact, computed using CRASH III PC, was 39.8 KPH (24.7 MPH) using a CDC of 12FZEW3 and a PDOF of 355 degrees. The combined direct and induced damage width was 155 cm (61 in). The maximum crush depth was 65 cm (25.6 in) at C_4. At impact with the utility pole, the forces involved exceeded the manufacturer's threshold in the driver's side supplemental restraint system and the airbag deployed.

Vehicle 1 rotated clockwise approximately 100 degrees after impact and came to final rest facing North with the rear wheels in the westbound travel lane.

The driver of Vehicle 1 sustained major injuries consisting of fractures, lacerations and abrasions; maximum AIS = AIS-3. Extrication procedures were not required, but the driver was assisted from the vehicle due to her injuries. The driver was transported by land to a regional trauma center where she was admitted for treatment. Vehicle 1 was towed from the scene due to damage sustained in this crash.

This document is disseminated under the sponsorship of the Department of Transportation in the interest of information exchange. The United States Government assumes no responsibility for the contents or use thereof.

The opinions, findings, and conclusions expressed in this publication are those of the authors and not necessarily those of the National Highway Traffic Safety Administration.

The crash investigation process is an inexact science which requires that physical evidence such as skid marks, vehicular damage measurements, and occupant contact points be coupled with the investigator's expert knowledge and experience of vehicle dynamics and occupant kinematics in order to determine the pre-crash, crash, and post-crash movements of involved vehicles and occupants.

Because each crash is a unique sequence of events, generalized conclusions cannot be made concerning the crashworthiness performance of the involved vehicle(s) or their safety systems.

COLLISION SEQUENCE:

Pre-Crash: This single vehicle crash occurred during the morning hours of a winter weekday on a three-lane, undivided, asphalt paved roadway in [redacted], Maryland. The weather was clear - there had been an earlier ice storm - and the roadway surface was covered with "glare" ice. Visibility was good and there were no viewing restrictions. Traffic volume was light, and there is a posted 48 KPH (30 MPH) speed limit.

The north edge of the east/west roadway is a 15cm (6 in) raised concrete curb. The 2.4 m (8 ft) north shoulder is separated from the westbound travel lane by a single, solid white painted line. The westbound travel lane is separated from the eastbound left turn lane by double, solid yellow painted lines. The eastbound left turn lane is separated from the eastbound travel lane by a single, broken white painted line. The eastbound travel lane is separated from the 1.4 m (4.5 ft) south shoulder by a single, solid white painted line. The roadway is straight and there is a six percent downgrade for westbound traffic. The estimated coefficient of friction, at the time of the crash, was .10.

Vehicle 1, a 1991 Ford Taurus LX four-door, was being driven west in the westbound travel lane by the unrestrained 58 year old female driver (the case occupant) at a speed estimated to have been between 48 and 56 KPH (30 and 35 MPH). The vehicle had just passed the hill crest and was starting to descend the long six percent downgrade when the driver apparently realized her speed was too fast for the icy road conditions. The driver, applied, and locked, the brakes causing Vehicle 1 to begin a forward right veering skid.

Crash: Vehicle 1 skidded across the north shoulder and the right front wheel impacted and crossed the 15 cm (6 in) raised concrete curb, CDC 12FRWN3. The right rear wheel then struck and crossed the curb, CDC 12FRWN9. The left front and left rear wheels then struck and crossed the raised concrete curb, CDC's were 12FLWN3 and 12FLWN9 respectively. Vehicle 1 continued approximately 8.2 m (27 ft) in a westerly direction and impacted a 45.7 cm (18 in) diameter wood utility pole in a head-on configuration approximately 2.1 m (7 ft) north of the roadway's north curb line. The Delta V for this impact, computed using CRASH III PC, was 39.8 KPH (24.7 MPH) using a CDC of 12FZEW3 and a PDOF of 355 degrees. The combined direct and induced damage width was 155 cm (61 in), and the maximum crush depth was 65 cm (25.6 in) at C_4. The forces involved in the utility pole impact exceeded the manufacturer's threshold in the driver's side supplemental restraint system and the airbag deployed.

NOTE: It appears that a small amount of residual frozen snow from earlier snow removal efforts had accumulated at the raised concrete curb resulting in a ramp effect. While the "ramped" curb was sufficient to

cause minor damage to Vehicle 1's wheels, the speed loss resulting from these impacts was insufficient to cause activation of the vehicle's supplemental restraint system.

Post Crash: At impact, Vehicle 1 began a clockwise rotation of approximately 100 degrees, disengaged the pole and came to final rest facing north approximately 2.7 m (9 ft) south of POI. The rear wheels of Vehicle 1 were in the westbound travel lane and the front wheels of Vehicle 1 were in the westbound travel lane and the front wheels were on the asphalt paved north shoulder.

Occupant Kinematics: The 58 year old female driver (the case occupant), who was 170 cm (67 in) in height and weighed 86 kg (190 lb), was seated in a normal, upright seated position on a split bench seat with separate backs. The left front seat was adjusted to the forward most position and to maximum height. The driver was not wearing the available three-point manual lap/shoulder safety restraints. She had both hands on the steering wheel rim at the 11:00 and 1:00 o'clock positions. Her left foot was on the floor/toe pan and her right foot was on the brake pedal as Vehicle 1 began its forward, right veering skid.

As Vehicle 1 crossed the north curb of the roadway, the driver was braced with her back pressed into the left front seat back rest by her fully extended arms which were locked at the wrists and elbows. In addition, her left foot was braced on the floor/toe pan and her right foot was braced on the vehicle's brake pedal. She was projected to her left during the skid.

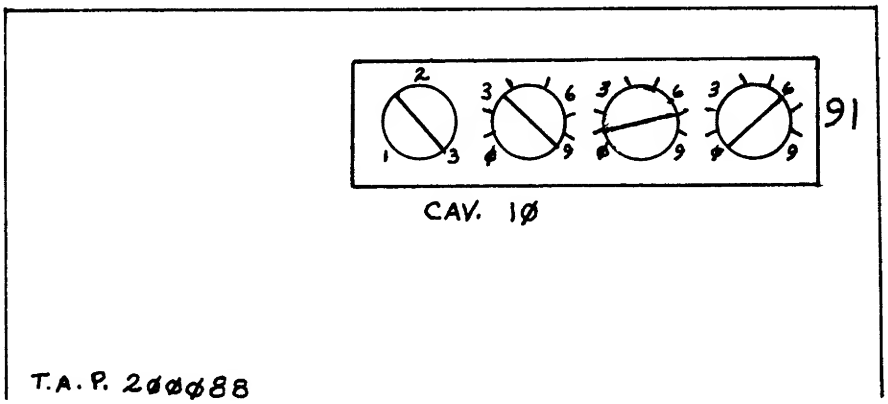
At impact with the utility pole, the driver was projected forward and upward. Her braced arms and hands pushed the upper half of the steering wheel rim forward as the airbag deployed. The driver sustained abrasions of the left and right forearms as her hands were projected from the deformed steering wheel rim. At the same time, the driver's face contacted the airbag resulting in an abrasion to her chin. The driver continued forward, upward and to the left, overriding the airbag and her head contacted the left sun visor and the windshield. No reported injury was sustained in this contact, but the visor was deformed and the windshield sustained a "spider-web" crack in the upper left sector.

As the driver was projected forward and upward her braced left knee impacted the left lower instrument panel resulting in a left femur-neck fracture, a left tibial plateau fracture and a laceration of the left knee (see photos 35 and 36). Her right knee impacted the lower instrument panel to the right of the steering column resulting in a 12 cm laceration. It appears that as she rotated upward on her right foot, and it flexed, she sustained an axial load that resulted in an open fracture and dislocation of the right bimalleolus, and an open fracture of the right talus (astragalus).

Supplemental Restraint System:

The case vehicle was equipped with a driver's side supplemental restraint system and the airbag deployed as a result of a frontal impact with a 45.7 cm (18 in) diameter wood utility pole. The airbag module was manufactured by TRW. There were no markings on the airbag fabric, but the top module flap had the following marks:

Top of Steering Wheel



The airbag was not damaged during the crash sequence and did not yield evidence of occupant contact. The bag measured approximately 60 cm (23.5 in) in diameter in its deflated, post-crash state. The airbag was vented by two ports located on the back side of the bag (away from the driver). The 2.5 cm (1 in) diameter ports were located at the 10:30 and 1:30 o'clock positions. The bag contained an internal tether strap affixed to a 19 cm (7.5 in) diameter reinforcement sewn to the center of the bag.

At the time of Dynamic Science's on-site inspection that occurred 11 days post-crash, the airbag contained six vertical fold creases and four faint horizontal fold creases. The fold creases were oriented to the top of the steering wheel.

Scene Clearance:

The driver of Vehicle 1 (the case occupant) sustained major injuries consisting of fractures, lacerations and abrasions; maximum AIS = AIS-3. The driver was not entrapped and emergency personnel did not use any extrication procedures to gain entrance to the vehicle. However, the driver required assistance to exit the vehicle due to her injuries. She was transported by land to a regional trauma center where she was admitted for treatment. Vehicle 1 was towed from the scene due to damage sustained in this crash.

Safety Standards: There were no violations of Federal Motor Vehicle Safety Standards found during the on-site inspection of Vehicle 1.

However, a possible problem was identified with the Ford Taurus steering column, or steering gear box. It appears that either the steering column separated from the steering wheel hub during the airbag deployment, or the steering gear box was damaged internally in this frontal impact to the extent that the driver had no post-crash steering control of the vehicle - the steering wheel turns, but has no effect on the front wheels.

This crash is the second crash investigated in a one year period by Dynamic Science in which a 1990/1991 Ford Taurus had no post-crash steering capability.

CRUSH PROFILE IN CENTIMETERS

NOTES: Identify the plane at which the C-measurements are taken (e.g., at bumper, above bumper, at sill, above sill, etc.) and label adjustments (e.g., free space).

Measure and document on the vehicle diagram the location of maximum crush.

Measure C1 to C6 from driver to passenger side in front or rear impacts and rear to front in side impacts.

Free space value is defined as the distance between the baseline and the original body contour taken at the individual C locations. This may include the following: bumper lead, bumper taper, side protrusion, side taper, etc. Record the value for each C-measurement and maximum crush.

Use as many lines/columns as necessary to describe each damage profile.

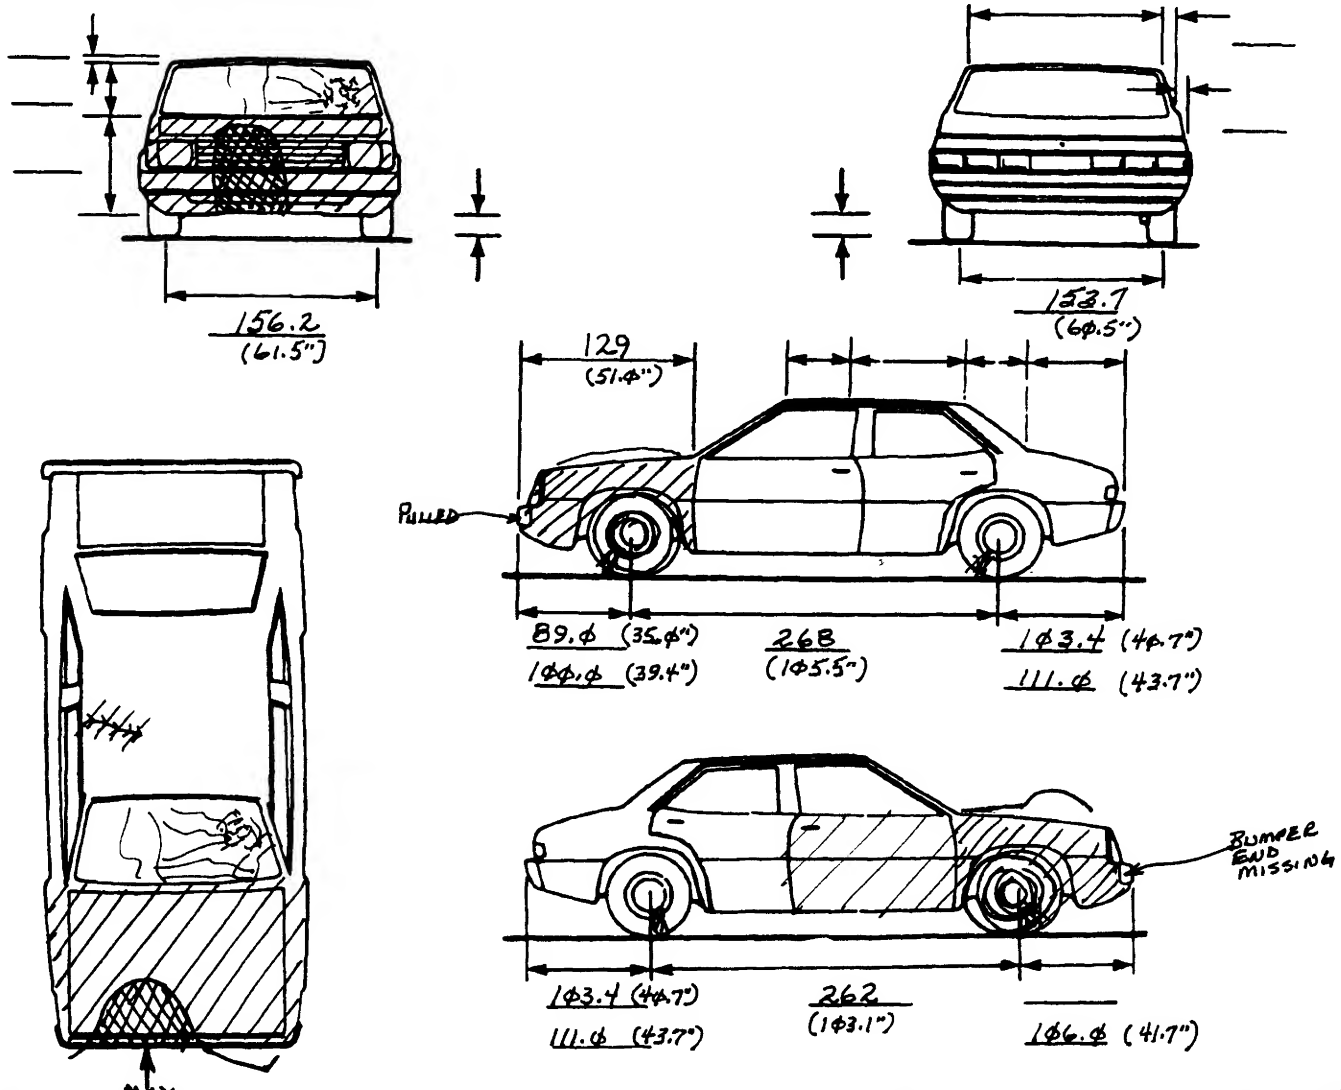
MEASUREMENTS IN CENTIMETERS



NOTES: Sketch new perimeter and cross hatch direct damage and single hatch induced damage on all views. Annotate observations which might be useful in reconstructing the accident (e.g., grass in tire bead, direction of striations, scuff on sidewalls, etc.). If pulling trailer, sketch type of trailer and damage received on the back of this page.

Annotate any damage caused by extrication such as component removal by torching, prying, or hydraulic shears.

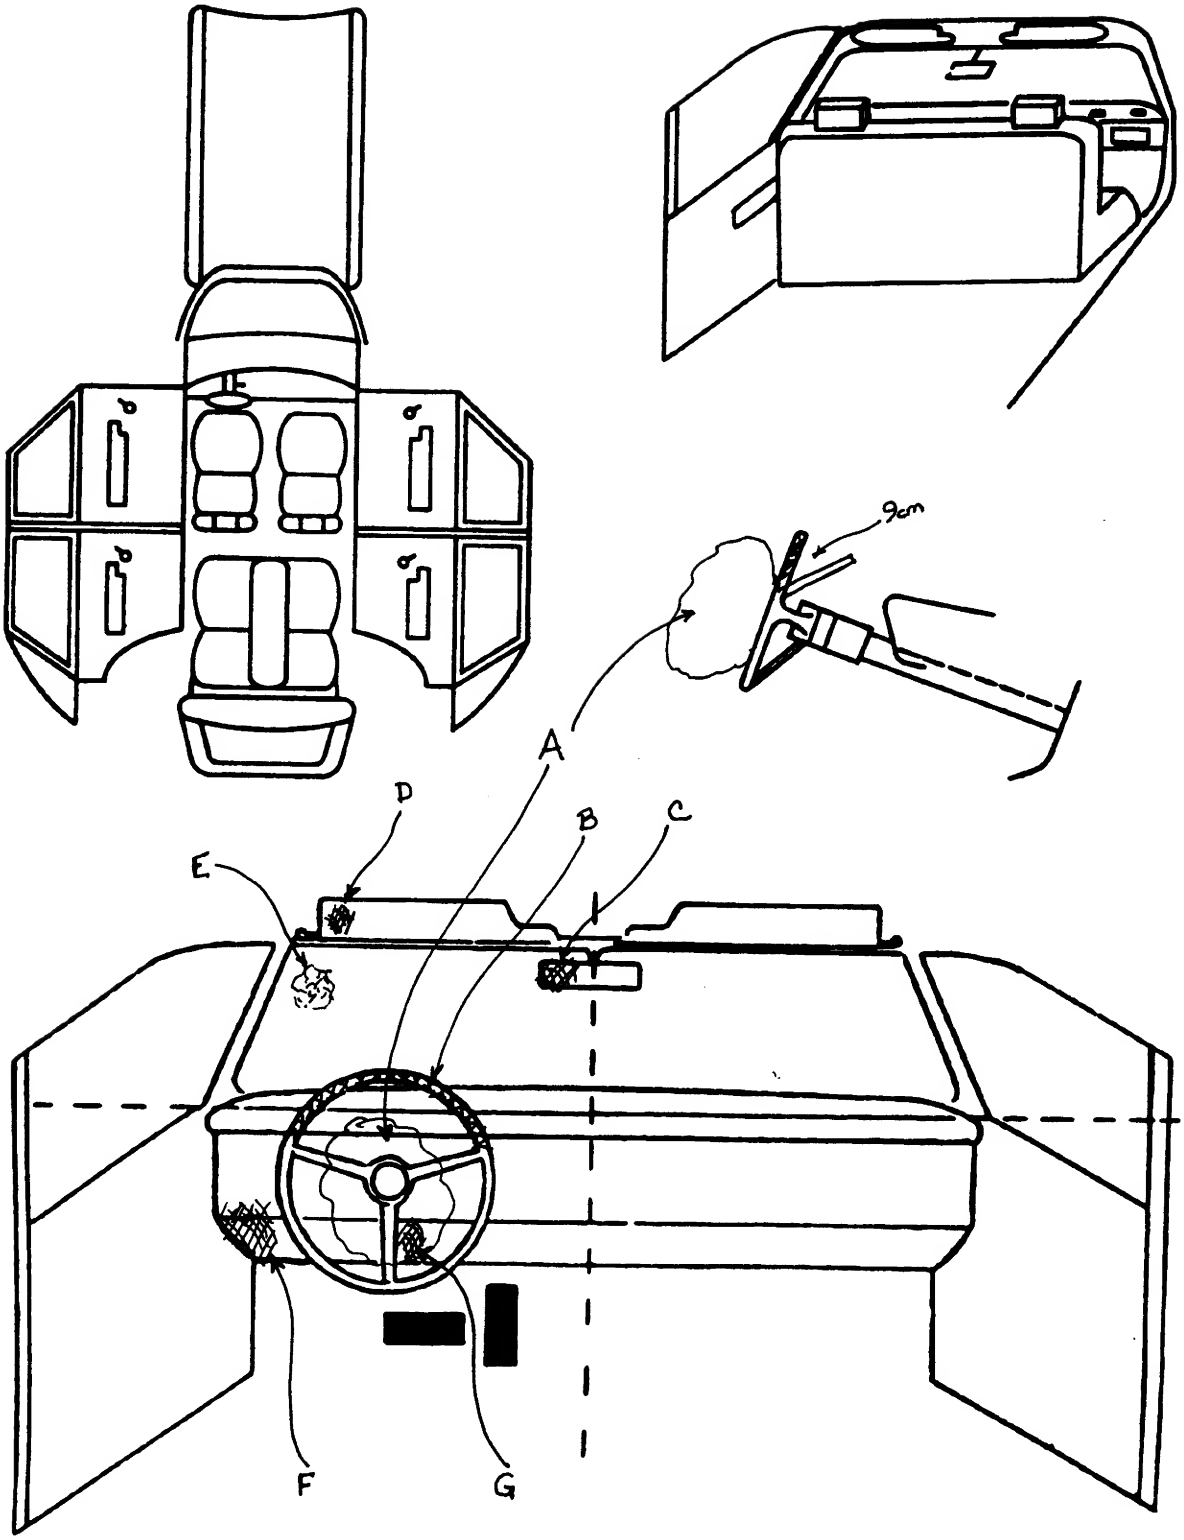
VEHICLE INTERIOR SKETCHES

Note area of ejection/entrapment



Sketch windshield contact(s) and the damaged area(s) on the instrument panel outline (e.g., radio, glove compartment, damage to instrument panel structure.
Cross hatch contact points, draw spider webs or use other annotation as may be appropriate.
Annotate the contacted area with a letter (begin with A) and list on the Points of Occupant Contact page.

CODES FOR INTERIOR COMPONENTS

FRONT
- (01) Windshield
- (02) Mirror
- (03) Sunvisor
- (04) Steering wheel rim
- (05) Steering wheel hub/spoke
- (06) Steering wheel (combination of codes 04 and 05)
- (07) Steering column, transmission selector lever, other attachment
- (08) Add on equipment (e.g., CB, tape deck, air conditioner)
- (09) Left instrument panel and below
- (10) Center instrument panel and below
- (11) Right instrument panel and below
- (12) Glove compartment door
- (13) Knee bolster
- (14) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, mirror, or steering assembly (driver side only)
- (15) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, or mirror (passenger side only)
- (16) Driver side air bag compartment cover
- (17) Passenger side air bag compartment cover
- (18) Windshield reinforced by exterior object (specify):_____
- (19) Other front object (specify):

LEFT SIDE
- (20) Left side interior surface, excluding hardware or armrests
- (21) Left side hardware or armrest
- (22) Left A (A1/A2)-pillar
- (23) Left B-pillar
- (24) Other left pillar (specify):
- (25) Left side window glass or frame
- (26) Left side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
- (27) Other left side object (specify):
- (28) Left side window sill

RIGHT SIDE
- (30) Right side interior surface, excluding hardware or armrests
- (31) Right side hardware or armrest
- (32) Right A (A1/A2)-pillar
- (33) Right B-pillar
- (34) Other right pillar (specify):
- (35) Right side window glass or frame
- (36) Right side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B pillar, or roof side rail.
- (37) Other right side object (specify):
- (38) Right side window sill

INTERIOR
- (40) Seat, back support
- (41) Belt restraint webbing/buckle
- (42) Belt restraint B-pillar attachment point
- (43) Other restraint system component (specify):_____
- (44) Head restraint system
- (45) Air bag (use codes "16" and "17" for injuries sustained from air bag compartment covers)
- (46) Other occupants (specify):
- (47) Interior loose objects
- (48) Child safety seat (specify):
- (49) Other interior object (specify):

ROOF
- (50) Front header
- (51) Rear header
- (52) Roof left side rail
- (53) Roof right side rail
- (54) Roof or convertible top

FLOOR
- (56) Floor (including toe pan)
- (57) Floor or console mounted transmission lever, including console
- (58) Parking brake handle
- (59) Foot controls including parking brake

REAR
- (60) Backlight (rear window)
- (61) Backlight storage rack, door, etc.
- (62) Other rear object (specify):

CONFIDENCE LEVEL OF CONTACT POINT
- (1) Certain
- (2) Probable
- (3) Possible
- (9) Unknown

CHILD SAFETY SEAT FIELD ASSESSMENT

When a child safety seat is present enter the occupant's number in the first row and complete the column below the occupant's number using the codes listed below. Complete a column for each child safety seat present.

Occupant Number						
1. Type of Child Safety Seat						
2. Child Safety Seat Orientation						
3. Child Safety Seat Harness Usage						
4. Child Safety Seat Shield Usage						
5. Child Safety Seat Tether Usage						
6. Child Safety Seat Make/Model		Specify Below for Each Child Safety Seat				

1. Type of Child Safety Seat

   (0) No child safety seat

INJURY DATA

Record below the actual injuries sustained by this occupant that were identified from the official and unofficial data sources. Remember not to double count an injury just because it was identified from two different sources. If greater than ten injuries have been documented, encode the balance on the Occupant Injury Supplement.

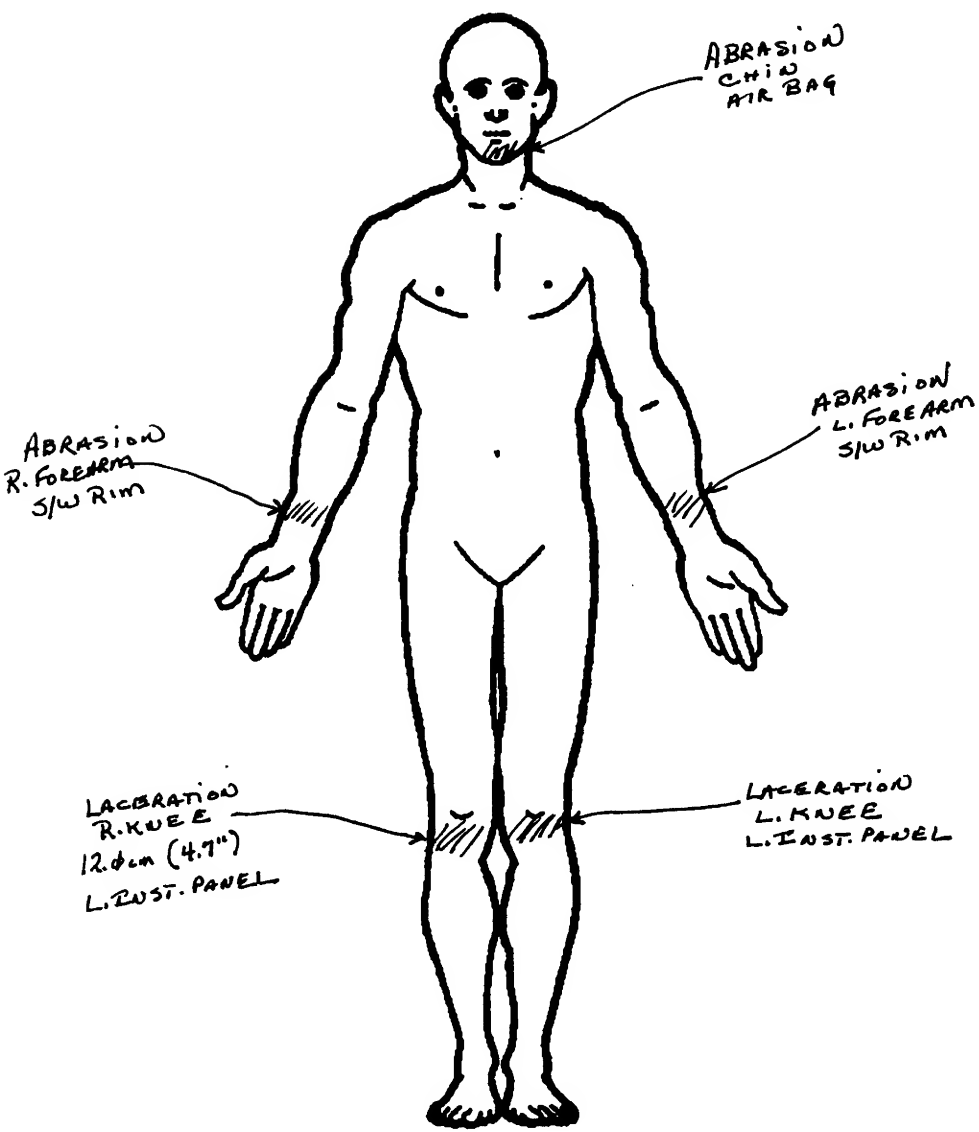
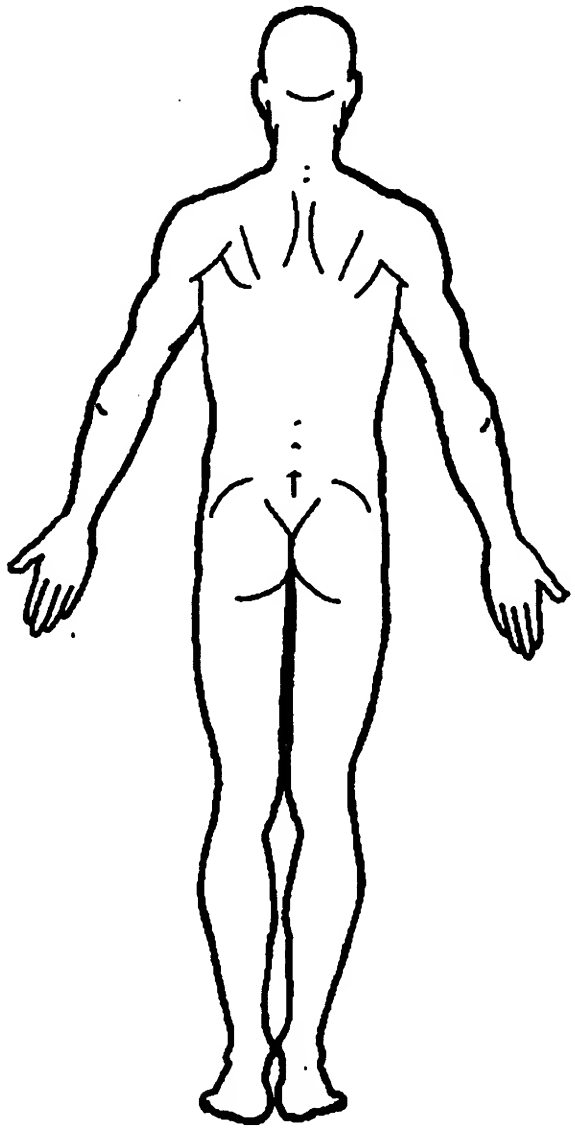
OFFICIAL INJURY DATA — SOFT TISSUE INJURIES

Indicate the Location, Specific Anatomic Structure, Detail (size, depth, fracture type, head injury clinical signs and neurological deficits), and Source of all injuries indicated by official sources (or from PAR or other unofficial sources if medical records and interviewee data are unavailable.)





SOURCE OF INJURY DATA

OFFICIAL
(1) Autopsy records with or without hospital/ medical records
(2) Hospital/medical records other than emergency room (e.g., discharge summary)
(3) Emergency room records only (including associated X-rays or other lab reports)
(4) Private physician, walk-in or emergency clinic

UNOFFICIAL
(5) Lay coroner report
(6) E.M.S. personnel
(7) Interviewee
(8) Other source (specify):

(9) Police

INJURY SOURCE

FRONT
(01) Windshield
(02) Mirror
(03) Sunvisor
(04) Steering wheel rim
(05) Steering wheel hub/spoke
(06) Steering wheel (combination of codes 04 and 05)
(07) Steering column, transmission selector lever, other attachment
(08) Add on equipment (e.g., CB, tape deck, air conditioner)
(09) Left instrument panel and below
(10) Center instrument panel and below
(11) Right instrument panel and below
(12) Glove compartment door
(13) Knee bolster
(14) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, mirror, or steering assembly (driver side only)
(15) Windshield including one or more of the following: front header, A (A1/A2)-pillar, instrument panel, or mirror (passenger side only)
(16) Driver side air bag compartment cover
(17) Passenger side air bag compartment cover
(18) Windshield reinforced by exterior object (specify):
(19) Other front object (specify):

LEFT SIDE
(20) Left side interior surface, excluding hardware or armrests
(21) Left side hardware or armrest
(22) Left A (A1/A2)-pillar
(23) Left B-pillar
(24) Other left pillar (specify):
(25) Left side window glass or frame
(26) Left side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
(27) Other left side object (specify):
(28) Left side window sill

RIGHT SIDE
(30) Right side interior surface, excluding hardware or armrests
(31) Right side hardware or armrest
(32) Right A (A1/A2)-pillar
(33) Right B-pillar
(34) Other right pillar (specify):
(35) Right side window glass or frame
(36) Right side window glass including one or more of the following: frame, window sill, A (A1/A2)-pillar, B-pillar, or roof side rail.
(37) Other right side object (specify):
(38) Right side window sill

INTERIOR
(40) Seat, back support
(41) Belt restraint webbing/buckle
(42) Belt restraint B-pillar or door frame attachment point
(43) Other restraint system component (specify):
(44) Head restraint system
(45) Air bag (use codes "16" and "17" for injuries sustained from air bag compartment covers)
(46) Other occupants (specify):
(47) Interior loose objects
(48) Child safety seat (specify):
(49) Other interior object (specify):

ROOF
(50) Front header
(51) Rear header
(52) Roof left side rail
(53) Roof right side rail
(54) Roof or convertible top

FLOOR
(56) Floor (including toe pan)
(57) Floor or console mounted transmission lever, including console
(58) Parking brake handle
(59) Foot controls including parking brake

REAR
(60) Backlight (rear window)
(61) Backlight storage rack, door, etc.
(62) Other rear object (specify):

EXTERIOR of OCCUPANT'S VEHICLE
(65) Hood
(66) Outside hardware (e.g., outside mirror, antenna)
(67) Other exterior surface or tires (specify):
(68) Unknown exterior objects

EXTERIOR OF OTHER MOTOR VEHICLE
(70) Front bumper
(71) Hood edge
(72) Other front of vehicle (specify):
(73) Hood
(74) Hood ornament
(75) Windshield, roof rail, A-pillar
(76) Side surface
(77) Side mirrors
(78) Other side protrusions (specify)
(79) Rear surface
(80) Undercarriage
(81) Tires and wheels
(82) Other exterior of other motor vehicle (specify):
(83) Unknown exterior of other motor vehicle

OTHER VEHICLE OR OBJECT IN THE ENVIRONMENT
(84) Ground
(85) Other vehicle or object (specify)
(86) Unknown vehicle or object

NONCONTACT INJURY
